

# CREATE. CONTROL. CAPTURE.

## Software for interactive whiteboards, plasma and LCD overlays

Interact is the new control and annotation software designed for use with any Interactive Technologies whiteboard, plasma or LCD overlay product. Intuitive and user-friendly, Interact is compatible with the latest Windows™ operating systems and takes a matter of minutes to load. And you don't have to be a computer genius to operate it, either. Simply by using the on-board Quick Reference Guide, even the most committed technophobes will soon feel comfortable and confident with the software; it really is that easy. It's what transforms our hardware into easy-to-use, versatile, state-of-the-art presentation and communication tools, enabling you to:

- Control attached computer applications and multimedia sources from one toolbar, simply by touching the screen
- Create your own dynamic and engaging presentations and training materials, from any computer-based or digital source
- Capture the annotations and diagrams you create on screen and save them as computer files for later distribution
- Compatible with ITL and all leading makes of interactive whiteboards, tablets, PC's and touch screen overlays
- Makes it easy to select and navigate between attached computer applications and multimedia sources – all from one toolbar
- Enables annotation over computer files and images; simply edit and save the notes you make, then print them out or email them for further assimilation
- Unique handwriting recognition software that can turn handwritten notes into computer text

## Create

While Interact comes loaded up with useful tools and libraries of resource material, it does not provide users with finished, ready-to-use presentations or educational material. Instead, it gives you the ability to create your own – suited to your specific situation, tailored to your unique needs.

It enables you to draw on a vast range of source material – like CD-ROMs, PowerPoint and other computer-based applications, web pages, and even DVD and video – to make your presentations, lessons, training programmes and meetings more dynamic, immersive, engaging and, above all, effective.

## Control

The unobtrusive Interact toolbar can be positioned anywhere on the screen. It's always available, regardless of the current on-screen application, giving you quick and easy access to the tools you need, when you need them.

You control it in the same way you would a computer, except your finger directs the cursor. And, because it enables you to control everything from the screen at the front of the room, whether it's colleagues, students or prospective clients, it makes it just that little bit easier to retain control of your audience.

## Capture

The software makes sophisticated interaction possible. For example, students working from CD-ROMs that require answers to be typed can now simply write their answers directly on the interactive whiteboard. This is automatically transferred to the CD-ROM as typed text, using the handwriting recognition tool. Another useful annotation tool for the classroom allows the removal of existing labels from diagrams, saving teachers time when producing worksheets. The versatile screen capture tool allows the user to capture all or part of the screen image, which can be saved and used in presentations. For example, a JPEG digital photo can be edited and then e-mailed to others.

In the boardroom or meeting room, annotation tools help presenters highlight their key messages more effectively. They also make it easy to capture everyone's ideas during a brainstorming session. And, during collaborative projects, they allow everyone to contribute. But the real cost-effective, timesaving benefit of Interact is that it can capture all the notes, drawings and diagrams made and save them as computer files for later distribution.

N.B. The Short Form Users Manual and Quick Reference Guide are supplemented by short (ten-minute) online tutorials to help familiarise users with the full breadth of Interact's features and functionality.

## Technical Specifications - Interact Software

### Features

Saves individual slides or presentations as jpeg, bitmap or itc presentation files

Over 6000 high quality clipart images

Copy any colour from your screen using virtual ink

Drawing tools

Edit Tools

Toolbox – backgrounds, ruler, protractor, timer and European maps

On-screen calculator and keyboard with options

Pre-programmed backgrounds – subject specific to aid the creation of easy lesson plans

Wordsearch – beat the rainy lunch break blues with educational quizzes

Help – comprehensive HTML help files

Compatibility – licensed to work with any interactive whiteboard, tablet, PC or any other touch screen overlay

### Windows operating systems:

Pentium® 150 MHz processor (Pentium II processor or later recommended)

32 MB of RAM (128MB Recommended)

Windows 98SE, Windows NT® 4.0 (SP-6) operating system or later recommended

210 MB of free hard disk space for complete installation of Interact Software and primary or secondary clipart

CD ROM / DVD Drive required

Free USB necessary for Interactive whiteboard or touch screen

### Produced in the UK

ITL reserve the right to change the product specifications without notice
